

IASCBC2012

2nd

**INTERNATIONAL ANATOMICAL SCIENCES
AND CELL BIOLOGY CONFERENCE**

36th

AAT ANNUAL CONFERENCE

**PROCEEDINGS OF
THE ANATOMY ASSOCIATION OF THAILAND**

December 6-8, 2012

Organized by
Department of Anatomy,
Faculty of Medicine, Chiang Mai University
and
Anatomy Association of Thailand (AAT)

จัดโดย
ภาควิชากายวิภาคศาสตร์ คณะแพทยศาสตร์
มหาวิทยาลัยเชียงใหม่
ร่วมกับ
สมาคมกายวิภาคศาสตร์แห่งประเทศไทย

ISSN 1905-8748

CONTENTS

Message from the President of Chiang Mai University i
 Message from the Acting Dean of Faculty of Medicine, Chiang Mai University i
 Message from the President of the Anatomy Association of Thailand ii
 Message from the Organizing Committee Chair ii
 Message from the Scientific Chair iii
 Scientific committee iv

PLENARY LECTURE

Perspectives in Anatomical Sciences 3
Prof. Prasert Sobhon

Molecular and Cellular Imaging in Exploitation for Nanomedicine and Vaccine Designs 5
Prof. Holland Cheng

Cellular Biology of Aging Process 6
Prof. Mitsutoshi Setou

Fish Reproductive Biology: A World of Diverse Strategies 7
Prof. Abigail Elizur

How to Conduct a Scientific Study that Could be Published in Clinical Anatomy 8
Emeritus Prof. Stephen W. Carmichael

SYMPOSIUM 1: NEUROSCIENCE

Imaging the Neuroendocrine Systems of Reproduction 9
Prof. Ishwar S. Parhar

Dysbindin-1 Reductions in Schizophrenia may be Induced by Oxidative Stress and Result
 in Impairment of Synaptic Function through Downregulation of Arc 10
Assoc Prof. Wei-Yi Ong

Olig2 Positive Cells take Region-specific Fates in Response to Physiological or Pathological
 Stimuli in the Adult Brain 11
Prof. Akio Wanaka

Runx1t1, a Novel Regulator of Microglial Activation in Brain Diseases 12
Prof. Dheen, S.Thameem

The Pulvinar Nucleus and Visual Motion Coding 13
Prof. Martha E. Bickford

Role of miR-124 in Dopaminergic Neurons of MPTP-induced Parkinson's Disease Model and *in vitro* 14
Assoc Prof. Tay Sam Wah, Samuel

Oligodendrocyte Progenitor Cell Transplants Promote Remyelination in a Rat Model of Periventricular
 Leukomalacia 15
Prof. Wei Wang

Guarding the Sentinels of the Brain 16
Assoc Prof. Sharmili Vidyadaran

SYMPOSIUM 2: CANCER BIOLOGY

Role of the Y-Box Binding Protein-1 in Breast Cancer Progression 17
Prof. Boon-Huat Bay

Regulation of EBV Infection in Premalignant Nasopharyngeal Epithelial Cells 18
Prof. George S. W. Tsao

OFFICE
DEPOT

SYMPOSIUM 6: RESEARCH IN CLINICAL ANATOMY

Research in Clinical Anatomy 37
Prof. Srijit Das

Gender Differences in the Left Coronary Arteries, Sino-Atrial Node, and Brain Regions from a Viewpoint
 of Elements 38
Visiting Prof. Yoshiyuki Tohno

An Anatomic Study of the Pelvic Outlet Muscles in Man 40
Prof. Keiichi Akita

Interpopulation Variation in Tarsal Coalition Patterns 41
Assoc Prof. D. Troy Case

SYMPOSIUM 7: DEVELOPMENTAL BIOLOGY AND ANIMAL REPRODUCTION

Deciphering Transcription Factor Networks during *Caenorhabditis elegans* Development Using the New
 Imaging Framework Endrov 45
Assoc Prof. Thomas R. Bürglin

Developmental Program of Urogenital and Reproductive Organ Formation; Conditional Mutant
 Model Mouse Series to Analyze Organogenesis 46
Prof. Gen Yamada

Neurotransmitters, Neurohormones, and Other Queues Controlling Reproduction in
 Decapod Crustaceans 47
Prof. Peter J. Hanna

Fate, Attraction and Cell Migration: the Cell Biology of Fish Surrogates 48
Assoc Prof. Scott Cummins

FORUM: TRENDS OF ANATOMICAL EDUCATION

Trends of Anatomical Education 51
Prof. Meechai Srisai

Master Pieces in Congdon Anatomy Museum 52
Prof. Sanjai Sangvichien

Anatomy Education in the Modern Medical School Curriculum 53
Prof. Richard L. Drake

Formal Evaluations Confirm Students Successfully Learn Histology Completely Online Using an
 Innovative, Complementary, Series of Learning Resources 54
Prof. Geoffrey Meyer

Whither Anatomy? 55
Prof. M.K. Vidyadaran

A Level of Impact above the Conventional: Use of Donated Body for Clinical Anatomy and Surgical
 Skill Training in a Humanistic-Based Setting 56
Prof. Guo-Fang Tseng

MINI-SYMPOSIUM 1: MULTIMEDIA IN TEACHING

IT and Multimedia in Teaching Preclinical Subjects with Emphasis on Clinical Relevance:
 A Multimodal Virtual Anatomy Learning Tool for Medical Education 59
Prof. Ponnampalam Gopalakrishnakone

Evaluation of Anatomy Comic Strips for Further Production and Applications 60
Min Suk Chung, Hae Gwon Jang, Dong Sun Shin

LIBRARY
DEPT

MINI-SYMPOSIUM 2: MEDICAL EDUCATION

Standard and Criteria of Quality Assurance in Anatomical Science Postgraduate Studies 63
Prof. Hing Hiang Lian

To be announced 64
Assoc Prof. Yee Kong Ng

Anatomy: Foundation for Perfection in Imaging – A Vital Tool for All Clinical Disciplines 65
Prof. Patnaik V.V.Gopichand

ORAL PRESENTATION

OP11: Absent Left Main Coronary Artery: Prevalence and Clinical Relevance 69
Nasirudeen Ajayi, Lelika Lazarus, Ebrahim Vanker, and Kapil Satyapal

OP12: Complexity of the Human Sagittal Suture as an Indicator of Ancestry and Sex and
Its Relationship to the Parietal Foramen 72
John E. Byrd, Robert W. Mann

OP13: Stature Estimation from Foot Measurements in Thais 74
Thamonwan Suakabkaew, Suda Riengrojpitak, Montip Tiensuwan

OP21: Effect of VEGF Supplementation on Lipoaspirate-Derived Plastic Adherent Cells in Culture:
A Preliminary Study 78
*Jeanne Adiwinata Pawitan, Des Suryani, Arleni Bustami, Isabella Kurnia Liem,
Reza Yuridian Purwoko*

OP22: Effect of Thimerosal on C8-B4 Cells, Mouse Cerebellar Microglia Cell Line 80
Yamato Sakamoto, Seiji Ichida, Takeshi Minami

OP23: The Effect of Trans Fatty Acids from Repeated Heating Cooking Oil on Blood TNF- α 82
Eryati Darwin, Zubir

OP24: Ultrastructural Study of Human Palatine Tonsils with Anatomical and Embryological Review
Suggests Presence of Enteroendocrine Cells 86
Mostafa Kandil Soliman

OP25: Topical Application of Lansai C Reduces Inflammation in Croton-oil Induced Dermatitis-mice 91
Thanisorn Sukakul, Thongchai Taechowisan, Supin Chompoopong, Thanaporn Rungruang

OP26: Effects of 5,7-dimethoxy-4-p-methoxyphenylcoumarin on Microglia Activation after Global
Ischemia in Mice 93
*Bhornluck Paepetch, Atsara Rawangwong, Thongchai Taechowisan, Thanaporn Rungruang,
Supin Chompoopong*

POSTER PRESENTATION

PP101: Estrogen Promotes Neurite Outgrowth and Prevents High Glucose-Induced Caspase-3
Activation in Cultured DRG Neurons 97
Kantarat Lekkaew, Vipavadee Chaisuksunt

PP102: Localization of Dopamine Receptors in Striatum Neurons of Common Tree Shrew
(*Tupaia glis*) by Immunohistochemistry 98
*Ranida Quiggins, Kewalee Seeharach, Vipavadee Chaisuksunt, Noppadol Phasukdee,
Martha E. Bickford*

PP103: Comparative Anatomy and Histology of Elephant, Human and Tree Shrew Brains 99
*Chatchote Thitarom, Chaleamchat Somgird, Taweepoke Angkavanish, Anucha Sathanawong,
Sittidet Mahasawangkul, Kewalee Seeharach, Ranida Quiggins*

PP104: The Effect of Valproic Acid Withdrawal after 45 days on Hippocampus-Dependent Spatial Memory and Cell Proliferation	100
<i>Jariya Umka, Sutida Pounsant, Apiwat Sirichoat, Wunnee Chaijaroonkhanarak, Parichat Prachaney, Wanassanun Pannargrong, Peter Wigmore</i>	
PP105: Hippocampus-Dependent Spatial Memory and Cell Proliferation after Valproic Acid Withdrawal for 30 Days	101
<i>Jariya Umka, Apiwat Sirichoat, Sutida Pounsant, Wunnee Chaijaroonkhanarak, Parichat Prachaney, Wanassanun Pannargrong, Peter Wigmore</i>	
PP106: Genes Associated Cis-Regulatory Functions of Intragenic LINE-1	102
<i>Wachiraporn Wanichnopparat, Chatchawit Apornthewan, Apiwat Mutirangura</i>	
PP107: Effect of High Cortisol on Microglial Cell Morphology and Phagocytosis in vitro	103
<i>Prateep Amonruttanapun, Siriporn Chamniansawat, Sukumal Chongthammakun</i>	
PP108: Changes in NMDA Receptor Subunit 1 Gene Expression in Peripheral Blood of Patients with Major Depressive Disorder	104
<i>Benjamard Thaweethee, Samur Thanoi, Sutisa Nudmamud-Thanoi</i>	
PP109: Alterations of Glial Fibrillary Acidic Protein and Myelin Basic Protein in Rat Cingulate Cortex after Acute and Escalating Doses Methamphetamine Binge Administration	105
<i>Nuntaporn Suksamrahn, Samur Thanoi, Sutisa Nudmamud-Thanoi</i>	
PP110: Changes in Glutamate Transporter GLT-1 Expression in Rat Prefrontal Cortex after Chronic Exposure to Methamphetamine	106
<i>Walailuk Kerdsan, Samur Thanoi, Sutisa Nudmamud-Thanoi</i>	
PP111: Membrane Cholesterol Modulates Okadaic Acid (OA)-Induced Hyperphosphorylated Tau Protein in SH-SY5Y Cells	107
<i>Tanapol Limbunruang, Sukumal Chongthammakun</i>	
PP112: The Role of SUMO-1 in Activated Microglia	108
<i>Bobby Tan, Parakalan Rangarajan, S. Thameem Dheen</i>	
PP113: Sirtuin 3 Functions as an Important ROS Regulator in Activated Microglia	109
<i>Parakalan Rangarajan, Eng-Ang Ling, Lu Jia, S.Thameem Dheen</i>	
PP114: Recovery of The Central Nervous System in Protein-deficient Rats after Refeeding with Protein and Enriched Supplements	110
<i>Rapipan Sirdet, Yadaridee Viravud, Vasana Plakornkul</i>	
PP115: Effects of Curcumin on Neuronal Loss and Axonal Regeneration after Nerve Injury	113
<i>Sithiporn Agthong, Atitaya Kaewsema, Vilai Chentanez</i>	
PP116: Diagnosis of Charcot-Marie-Tooth Type 1 Disease: A Case Report	115
<i>Vilai Chentanez, Atitaya Kaewsema, Sithiporn Agthong, Jakkrit Amornvit, Nath Pasutharnchat</i>	
PP117: Change in Tumor Necrosis Factor-alpha (TNF- α) after 5, 7 dimethoxy-4-p-methoxyphenyl-coumarin in vivo Study	117
<i>Aisara Rawangwong, Bhornluck Paepetch, Thongchai Taechowisan, Thanaporn Rungruang, Supin Chompoopong</i>	
PP118: In Vitro Neuronal and Glial Differentiation of CD34+ Cells from Human Peripheral Blood	120
<i>Chanchai Songthaveesin, Sukumal Chongthammakun</i>	
PP119: Neuroprotective Effect of Purple Rice Extract against A β -induced Neurotoxicity in Cultured SK-N-SH cells	123
<i>Sarinthon Thummayot, Chainarong Tocharus, Kittikun Viwatpinyo, Korawan Sringarm, Jiraporn Tocharus</i>	

PP211: Histopathology of Endometriosis	151
<i>Morakot Sroyraya, Sineenart Songkoomkrong, Jaruwan Poljaroen, Yotsawan Tinikul, Peter J Hanna, Anna Wongkularb, Sawaek Weerakiet, Prasert Sobhon</i>	
PP212: Influence of Intracellular Calcium on Vascular Endothelial Growth Factor (VEGF) Expression in C6 glioma cells	152
<i>Pitak Chanthammachat, Vasutakarn Chongthammakun, Chaisit Pattanasuwan, Sukumal Chongthammakun</i>	
PP213: Effect of <i>Acanthus ebracteatus</i> Vahl and AuNPs in HeLa Cell Viability: Prospective of an Anticancer Herbal Medicine	153
<i>I-yanat Klaham, Amornpun Sereemaspun</i>	
PP214: Evaluation of FOXO Gene Expression in Human Serum Thai Ovarian Cancer Patients as a New Promising Biomarker	154
<i>Chawikan Boonwong, Amornpun Sereemaspun</i>	
PP215: Black Rice Bran Extract Prevents Cancer Progression in Cadmium-Exposed Breast Adenocarcinoma Cell Line	155
<i>Sucha Numkliang, Kangsadam Bennukul, Vijitra Leardkamolkarn, Sugunya Wongpornchai, Acharaporn Na Lampang Noenplab</i>	
PP216: Gene Profile of Y-box Associated Acidic Binding Protein (YBAP1) in Breast Cancer	159
<i>Olivia Jane Scully, Yingnan Yu, Ken Matsumoto, Boon Huat Bay</i>	
PP217: Localization of Y-box Binding Protein 1 (YB-1) in Cancer Cells	161
<i>Olivia Jane Scully, TianTian Guo, Yingnan Yu, Ken Matsumoto, George Yip, Boon Huat Bay</i>	
PP218: Silencing of Serglycin Gene Affects Cell Proliferation	164
<i>Chin En Yi Joanne, Scully Olivia Jane, Chua Pei Jou, Yu Yingnan, Yip George, Bay Boon Huat</i>	
PP219: Silver Nanoparticles Induces Morphological Changes and Cytotoxicity in Normal and Cancerous Breast Cells	166
<i>Cynthia Ong, Joanna Zhao Zhin Lim, Cheng Teng Ng, Jia'En Jasmine Li, Boon Huat Bay, Lin-Yue Lanry Yung</i>	
PP220: Cellular Localization of AuNPs in vitro	168
<i>Cynthia Ong, Ching Teng Carline Tan, Cheng Teng Ng, Jia'En Jasmine Li, Boon Huat Bay, Lin-Yue Lanry Yung</i>	
PP221: Scorpion Venom Induces Cytotoxicity in Human Gastric Cancer Cells in vitro	170
<i>Jian Ding, Boon-Huat Bay, P Gopalakrishnakone</i>	
PP301: Effects of Diarylheptanoid Analogs Obtained from <i>Curcuma comosa</i> Roxb. on C2C12 Myoblast Cells Proliferation	172
<i>Chittipong Tipbunjong, Apichart Suksamram, Ganyapong Chaturapanich, Narisorn Kitiyanant, Yindee Kitiyanant, Chumpol Pholpramool</i>	
PP302: The Effects of in vitro Maturation Media on Meiosis Resumption and Nuclear Maturation of Immature Cat Oocytes	173
<i>Bongkoch Turathum, Chinarat Changsangfa, Kulnasan Saikhun, Yindee Kitiyanant</i>	
PP303: Phytoecdysteroids from <i>Vitex glabrata</i> R. Br. Enhance Proliferation in Mouse Skeletal Muscle Cells	174
<i>Petdao Petchuay, Sataporn Wantanawijarn, Yindee Kitiyanant, Pawinee Piyachaturawat, Apichart Suksamram, Ganyapong Chaturapanich, Chumpol Pholpramool</i>	

PP304: The Study of Osteogenic Potential of Hydroxyapatite Composites with Marrow Mesenchymal Stem Cells in Pig	175
<i>David Mazensky, Jan Danko, Viera Almasiova, Eva Petrovova, Lubomir Medvecký</i>	
PP401: Effect of Curcumin on Periductal Fibrosis and Bile Canaliculi in Chronic <i>Opisthorchis viverrini</i> – Infected Hamsters	178
<i>Wunnee Chaijaroonkhanarak, Prapaporn Jattujan, Channarong Arunyanart, Jariya Umka, Somchai Pinlaor</i>	
PP402: Localization and Roles of Corazonin in the giant freshwater prawn, <i>Macrobrachium rosenbergii</i>	179
<i>Wilairat Kankuan, Tipsuda Thongbuakaew, Chanudporn Sumpownon, Saowaros Suwansa-ard, Prasert Meeratana, Chaitip Wanichanon, Charoonroj Chotwiwatthanakun, Yotsawan Tinikul, Peter J. Hanna, Prasert Sobhon</i>	
PP403: Early Ventricular Hypertrophy, Fibrosis and Edema in Young Offspring from Rat Submitted to Undernutrition during Pregnancy	180
<i>Parichat Prachaney, Angel L. Lopez de Pablo, Luis Condezo-Hoyos, Pilar Rodriguez-Rodriguez, Javier F Regadera, M. Rosario López-Giménez, M. Carmen Gonzalez, Silvia M. Arribas</i>	
PP404: Association Between Doppler Sonographic Data and Degree of Histological Lesions in the Intimal and Medial Layer of Saphenous Veins from Patients with Chronic Venous Insufficiency	181
<i>Parichat Prachaney, Juan P. Velasco-Martin, Pilar Rodriguez-Rodriguez, Maria Rubio, Gabriel España, Luis M. Reparaz, Angel L. Lopez de Pablo, Silvia Arribas</i>	
PP405: Localization of Serotonin (5-HT) and Dopamine (DA) in the eye-stalk of the mud crab, <i>Scylla serrate</i>	182
<i>Kanjana Khornchatri, Napamane Kornthong, Yotsawan Tinikul, Peter J. Hanna, Prasert Sobhon</i>	
PP406: Vaccine Potential of Peroxiredoxin Protein Against Tropical Fasciolosis	183
<i>Kant Sangpairoj, Prasert Sobhon, Kulathida Chaithirayanon</i>	
PP407: <i>Fasciola gigantica</i> : The in vitro Anthelmintic Effects of Plumbagin on the Newly Excysted (NEJ) and 4-weeks-old Juveniles	184
<i>Natcha Lorsuwannarat, Pathanin Chantree, Veerawat Sansri, Chaitip Wanichanon, Prasert Sobhon</i>	
PP408: Existence and Distribution of Ghrelin-like Peptide in Gastrointestinal Tract of Freshwater Prawn, <i>Macrobrachium rosenbergii</i>	185
<i>Attakorn Engsusophon, Chanudporn Sumpownon, Tanapan Siangcham, Yotsawan Tinikul, Jaruwan Poljaroen, Peter Hanna, Prasert Sobhon</i>	
PP409: Distribution of Serotonin and Gamma-amino butyric acid Immunoreactivity in the Deutocerebrum of the Male Giant Freshwater Prawn, <i>Macrobrachium rosenbergii</i>	186
<i>Thanapong Kruangkum, Charoonroj Chotwiwatthanakun, Yotsawan Tinikul, Peter J. Hanna, Prasert Sobhon, Chaitip Wanichanon</i>	
PP410: <i>Fasciola gigantica</i> : Characterization of Monoclonal Antibody Against Recombinant Saposin-like Protein 2	187
<i>Pomanan Kueakhai, Narin Changklungmoa, Kulathida Chaithirayanon, Sineenart Songkoomkrong, Suda Riengrojpitak, Prasert Sobhon</i>	
PP411: Molecular Cloning and Characterization of Glutathione Peroxidase from <i>Fasciola gigantica</i>	188
<i>Rataya Tanomrat, Narin Changklungmoa, Wipaphorn Jaikua, Pomanan Kueakhai, Kulathida Chaithirayanon, Suda Riengrojpitak, Prasert Sobhon</i>	
PP412: Distribution of Superoxide Dismutase Protein in Adult <i>Fasciola gigantica</i>	189
<i>Wipaphorn Jaikua, Narin Changklungmoa, Pomanan Kueakhai, Suda Riengrojpitak, Kulathida Chaithirayanon, Prasert Sobhon</i>	

PP413: Molecular Cloning and Characterization of Thioredoxin-glutathione Reductase of <i>Fasciola gigantica</i>	190
Narin Changklungmoa, Suda Riengrojpitak, Pomanan Kueakhai, Kant Sangpairoj, Kulathida Chaithirayanon, Prasert Sobhon	
PP414: Analysis Methylation Microarray for Tissue Specific Detection	191
Tachapol Muangsub, Somboon Keelawat, Nakarin Kitkumthorn, Apiwat Mutirangura	
PP415: The Pattern of FMRFamide Immunoreactivity in <i>Opisthorchis viverrini</i>	192
Ratana Leksomboona, Wunnee Chaijaroonkhanarakb, Channarong Arunyanartb, Jariya Umkab, Malcolm K. Jones, Banchob Sripa	
PP416: Characterization and Expression of Red Pigment Concentrating Hormone (RPCH) in the Female Mud Crab (<i>Scylla olivacea</i>) and the Effect of 5-HT on Its Expression	193
Napamaneee Kornthong, Charoonroj Chotwiwatthanakun, Scott F. Cummins, Piyachat Chansela, Narin Changklungmoa, Kanchana Kornchatri, Thanapong Khruangkum, Yotsawan Tinikul, Peter J. Hanna, Prasert Sobhon	
PP417: Characterization and Localization of Cathepsin B2 in <i>Fasciola gigantica</i>	194
Pathanin Chantree, Manussabhom Phatsara, Krai Meemon, Chaitip Wanichanon, Prasert Sobhon	
PP418: Characterization of Cathepsin L Protease from Juvenile Liver Fluke, <i>Fasciola gigantica</i>	195
Weerawat Sansri, Narin Changklungmoa, Krai Meemon, Prasert Sobhon	
PP419: Muscle Plasticity in an Animal Experimental Model following Prenatal Exposure to Ethyl Alcohol	196
Pamela David	
PP420: Differential Expression of Coronin in Developing Tooth Germs	197
Kim Sun-Hun, Lee Seongheon, Kim Seonmi, Kim Min-Seok	
PP421: Detection of <i>Bacillus anthracis</i> by Biochemical Characterization, Views Microscopy and immunochromatography with Goat antibody-antianthraxa	198
ML Edy Parwanto, Hardy Senjaya	
PP422: Effects of Ethanolic Extract of <i>Butea superba</i> Roxb. on Contractility of Orchidectomized Rat Skeletal Muscles	199
Fardleela Binalee, Wandee udomuksorn, Ekkasit kumamsit, Surapong Vongvatcharanon, Uraporn Vongvatcharanon	
PP423: Effects of Ethanolic Extract of <i>Pueraria mirifica</i> , on Estrogen Levels and Functions of Ovariectomized Rat Skeletal Muscles	202
Kochakorn Sukjan, Wandee Udomuksorn, Ekkasit Kumamsit, Surapong Vongvatcharanon, Uraporn Vongvatcharanon	
PP424: Diagnostic Accuracy of a Sandwich ELISA for Detection of Circulating <i>Fasciola gigantica</i> Cathepsin B3 Protease	205
Panat Anuracpreeda, Runglawan Chawengkirtikul, Yotsawan Tinikul, Jaruwan Poljaroen, Charoonroj Chotwiwatthanakun, Prasert Sobhon	
PP425: Ethanol Extract of Curcuma comosa and its Diarylheptanoid on Skin Inflammation	207
Poonyawee Khosuk, Aporn Chuncharunee, Pawinee Piyachaturawat, Surawat Jariyawat	
PP426: Effect of Ethanol Extract of Curcuma comosa and its Diarylheptanoid on Wound Healing	211
Waratta Hemtong, Aporn Chuncharunee, Pawinee Piyachaturawat, Surawat Jariyawat	
PP427: Recovery of Cardiovascular System in Protein-deficient Rats after Refeeding with Protein and Enriched Supplements	214
Darunee Rodma, Vasana Plakornkul, Yadaridee Viravud	

PP428: Impairments in Masseter and Digastric Muscles of Streptozotocin-Induced Diabetic Rats	217
<i>Chittapon Juntararussamee, Sirinush Srichoeravej, Passara Lanlua, Tosawan Upachit, Phrae Bhanichkul, Pacharawan Janthap</i>	
PP429: Characteristics of Pericytes and Novel Desmin-Immunopositive Perivascular Cells in Rat Anterior Pituitary Gland	219
<i>Depicha Jindatip, Ken Fujiwara, Takashi Yashiro</i>	
PP430: Effects of Streptozotocin-induced Diabetes on Morphology of Corticomedullary Cells in Rat Adrenal Gland	221
<i>Phrae Bhanichkul, Sirinush Srichoeravej, Passara Lanlua, Chittapon Juntararussamee, Tosawan Upachit, Sirorat Janta, Thanyathorn Artkengkla, Amonrat Chookliang</i>	
PP431: Beneficial Effects of Young Coconut Juice Feeding on the Lipid Metabolism Profile, Liver and Kidney Functions in Orchidectomized Rats	223
<i>Nisaudah Radenahmad, Muhammadbakhoree Yusuh, Kitja Sawangjaroen, Piyakorn Boonyoung</i>	
PP432: Expression of Epididymal Secretory Protein E1-like Gene in <i>Penaeus monodon</i>	227
<i>Jutharat Sangatit, Wanida Santimanawong, Charoonroj Chotwiwatthanakun, Wattana Weerachayanukul, Boonsirm Withyachumnarnkul, Prasert Sobhon, Rapeepun Vanichviriyakit</i>	
PP433: Screening of Antioxidant Activities and Protein Profiles in Aerial Part of <i>Limnophila aromatica</i>	229
<i>Nongnut Uabundit, Sitthichai Iamsaard, Wiphawi Hipkhae, Kowit Chaisiwamongkol, Wipawee Boonkvang, Supaporn Muchimapura, Wannisa Sukhorum, Jindaporn Yimdee, Jintanaporn Wattanathorn</i>	
PP434: Evaluation of Anti-coagulant and Antioxidant Activities of Sulfated Polysaccharides from Red Seaweed <i>Gracilaria fisheri</i>	231
<i>Pitinarat Kamjopreecha, Twut Radtanatip, Thannicha sae-lao, Kanokpan Wongprasert</i>	
PP435: Effect of <i>Pouzolzia indica</i> Methanolic Extract against <i>Acanthamoeba</i> spp	234
<i>Kosol Roongruangchai, Tanawan Kummalue, Pornnapat Srihanad, Jantima Roongruangchai</i>	
PP436: Distribution Pattern of Coelomocytes in Sandfish, <i>Holothuria scabra</i>	237
<i>Yanvit Prompoon, Wattana Weerachayanukul, Boonsirm Withyachumnarnkul, Somluk Asuvapongpatana</i>	
PP437: The Effect of the Extract of Lansai C on Malaria Infection in <i>Plasmodium yoelii</i> 17XL – mice	238
<i>Achara Sitthi, Thongchai Taechowisan, Thanisorn Sukakul, Supin Chompoopong, Thanaporn Rungruang</i>	
PP438: Curcumin Attenuates Dengue Virus-Mediated Apoptosis	240
<i>Atthaphan Morchang, Thawornchai Limjindaporn</i>	
PP439: <i>Fasciola gigantica</i> : Characterization of a Monoclonal Antibody against Recombinant CathepsinL1H Protein	242
<i>Sirima Wongwairot, Pomanan Kueakhai, Narin Changklungmoa, Sineenart Songkoomkrong, Krai Meemon, Veerawat Sansri, Suda Riengrojpitak, Prasert Sobhon</i>	
PP440: Effect of Plumbagin on the Tegument and Motility of Adult <i>Paramphistomum cervi</i>	245
<i>Naruwan Saowakon, Chaitip Wanichanon, Prasert Sobhon</i>	
PP441: Histological Changes in Liver of Albino Rats Treated with Different Doses of Sodium Valproate	248
<i>Shakya R, Hoque M.K., Sapkota A.S., Gupta P.K.</i>	

PP457: DNA Damage in People Exposed to Formaldehyde– A Cytogenetic Study	294
<i>Anne D Souza, Rema Devi², A. S. D Souza</i>	
PP458: Beneficial Effect of <i>Cissus quadrangularis</i> on Osteopenia Associated with Type 1 Diabetes mellitus	296
<i>Srinivasa Rao Sirasanagandla, K Sreedhara Ranganath Pai, Kumar MR Bhat</i>	
PP459: A Cell Biological Explore of the Components in Wood Essential Oils with the Anti-oxidant Ability	300
<i>Yasuo Takano, Takayo Sasagawa, Misa Suzuki, Syouko Kitada, Maria Nishida, Setsuko Tohno, Yoshiyuki Tohno</i>	
PP460: Hepatic Glycogen and Glutathione Depletion in Acetaminophen Induced Toxicity is Attenuated with Methanol Extract of Plantago Major Leaves	302
<i>Farida Hussan, Rina Haryani Osman Basah, Mohd Rafizul Mohd Yusof, Faizah Othman</i>	
PP461: Study of the Anti-inflammatory Effects of Mongolian Traditional Herbal Medicine Named Thupuln and Its Treatment Results in Rheumatoid arthritis	304
<i>A.Avirmed, A.Auyrzana¹ D.Nyamsurendejid, S.Tundevrentsen, S.Enebish, D.Amgalanbaatar</i>	
PP462: Detection of Aromatic Hydrocarbons by Electrochemical Biosensor Cells	306
<i>Da Young Lee, In Young Jeong, Jin Woo Lee, Hae Ja Shin</i>	
PP463: Light-Responsive and Dynamic Polyelectrolyte Multilayer Surfaces to Reversibly Guide Cell Growth	307
<i>Alexis Goulet-Hanssens, Miloslav Sailer, Christopher J. Barrett</i>	
PP464: Cadmium Levels in Kidney and Liver of Northeastern Thais	311
<i>Atthapon Pidsaya, Bussakorn Suwannarong, Amnart Chaichoon, Vitoon Prasongwattana, Kowit Chaiciwamongkol, Wiphawi Hipkaeo</i>	
PP501: Structural Basis of Filamin Ig-Domain Binding to F-Actin: The Three-Dimensional Electron Microscopy	313
<i>Worawit Suphamungmee, Fumihiko Nakamura, John Hartwig, William Lehman</i>	
PP502: Vascularization of the Ciliary Ganglion in the Common Tree Shrew (<i>Tupaia glis</i>).....	314
<i>Reon Somana, Somneuk Nilbu-nga, Wasan Tangphokhanon, Wisuit Pradidarcheep</i>	
PP503: Testicular Ultrastructural Changes from Effects of Cadmium in Local Rodents (bank voles) as Bioindicator for Health Assessments of People Living in Cadmium-Contaminated Area, Mae Sot, Tak	316
<i>Yutthapong Tongpob, Supaporn Chuenchoojit, Sirinush Sricharoenvej</i>	
PP504: Assessment of Arterial Calcification by Using X-ray Computed Tomography and Application to Computational Modeling	318
<i>Shingo Hagino, Shuichiro Fukushima, Toshihiro Sera, Yoshiyuki Tohno, Pasuk Mahakkanukrauh, Mayumi Nishi, Tsutomu Araki</i>	
PP601: Is a Bare Spot a Good Landmark for Arthroscopic Evaluation of the Anterior Glenoid Bone Loss?	320
<i>Chusak Kijkunasathian, Chalermchai Limittlaohaphan, Naphorn Saengpetch, Porncham Saitongdee, Krai Meemon, Chinnawut Suriyonplengsaeng</i>	
PP602: Pelvic Accessory Spleen: A Rare Case Report	321
<i>Malivalaya Namking, Tansita Ananteerakul, Kimaporn Khamanarong, Wilaiwan Mo-thong, Wunnee Chaijaroonkhanaruk, Somsiri Ratansuwan</i>	
PP603: A Case of Bilateral Subclavian Arteries Passing in front of the Scalenus Anterior Muscles in Thai Cadaver.....	322
<i>Wunnee Chaijaroonkhanarak, Wanassanan Pannangrong, Jariya Umka, Parichat Prachaney, Amnart Chaichun, Malivalaya Namking, Kimaporn Khamanarong, Wilaiwan Mo-Thong</i>	

PP619: Study the Footprints of the Anterior Cruciate Ligament in Thais.....	345
<i>Ratiporn Jantalao, Sitha Piyawinijwong</i>	
PP620: Anatomic Variability of the Quadratus lumborum Muscles in Thai Cadavers	347
<i>Pitchayapha Chaijan, Aporn Chuncharunee, Sanjai Sangvichien</i>	
PP621: Acupressure Points on the Anterior Surface of the Arm in Accordance of Applied Thai Traditional Medicine.....	351
<i>Boonyarat Chaleephay, Thanaporn Rungruang, Siriporn Thitilertdecha</i>

Abstract

Background: Fried foods are often found in the Indonesian dishes. Heating process can increased of *trans*-fatty acids, affecting lipid metabolism and induces an inflammatory reaction

Objectives: To determine the effect of *trans*-fatty acids of commercial cooking oil on serum concentration of TNF- α

Materials and methods: Rats were divided into 5 groups; group I received a standard food as control, group II had additional corn oil, group III had additional palm oil, group IV had additional three times repeated heating of corn oil, and group V had additional three times repeated heating of palm oil. TNF- α was examined from the rats blood serum by ELISA.

Results: Increasing of rats body weight between groups were not statistically significant. TNF- α of control group (59.36 \pm 7.83) was statistically significant lower ($p < 0.005$) in compare to the group III (72.25 \pm 5.65), group IV (108.71 \pm 6.40) and group V (88.70 \pm 5.42), but was not different with group III (54.36 \pm 6.70). The results showed that repeated heating of corn oil and palm oil increased *trans* fatty acids and associated with TNF- α concentration

Conclusion: Repeated heating cooking oil induced increasing of *trans* fatty acid that increase of TNF- α

Keywords : Repeated heating cooking oil, *Trans*-fatty acid, TNF- α

Background

Epidemiological transition in Indonesia in last 12 years has been going along with the demographic transition, that characterized by a shift in the epidemiology of the cause of mortality from infectious diseases to non-communicable diseases. The data shows that non-communicable diseases such as stroke, hypertension and heart disease encompasses more than a one third the cause of death. Coronary heart disease can occur as it is influenced by several risk factors such as age, gender, genetics, high cholesterol levels, hypertension, smoking, diabetes mellitus, obesity, poor lifestyle (stress, alcohol, lack of physical exercise). National prevalence for population in age more than ten years that consumed less fruits and vegetables was 93,6%, and less physical activity was 48,2% (1).

One of the factors that led to high morbidity and mortality from heart disease is caused by eating habits and lifestyle of most Indonesian community, such as consuming processed foods with cooking oil. It starts from breakfast like fried rice, then lunch and dinner dishes with rice accompanied by fried fish, meat, or egg, and sauteed vegetables. For the snack they like sweet potatoes or banana fries, crackers and fried tempeh or tofu, that may contain *trans* fat. The commercial baked goods that used cooking oil repeatedly by reason of the saving, can lead to increased levels of *trans*-fatty acids (TFA) in the cooking oil (2).

Natural foods that is, unprocessed foods contain two main types of fatty acids there were saturated and unsaturated. Saturated fatty acids which come from

animal fats (meat, lard, dairy products) and tropical oils such as coconut and palm oils - raise the levels of LDL cholesterol. Unsaturated fatty acids which come from vegetable oils, in general do not increase cholesterol levels, and may reduce them. *Trans*-fatty acids are a third form of fatty acids. While TFA do occur in tiny amounts in some foods (particularly foods from animals), almost all the TFA now in our diets come from an industrial process that partially hydrogenates (adds hydrogen to) unsaturated fatty acids. TFA, then, are a form of processed vegetable oils (3).

TFA are unsaturated fats with at least one double bond in the *trans* configuration that are formed during the industrial hydrogenation of vegetable oils for food manufacturing. The consumption of monounsaturated *trans* fatty acids has been associated with a greater risk of cardiovascular disease (CVD). Two dietary sources exist for the TFAs present in the food supply of industrial production, in which TFAs are mainly derived from partially hydrogenated vegetable oils and natural sources, in which TFAs are found in smaller amounts in ruminant-derived food products. Unfortunately, very little scientific research to date has compared the specific health effects of TFAs from industrial and natural sources (4).

The influence of TFA consumption are decreases high-density lipoprotein (HDL) levels and increases low-density lipoprotein (LDL) levels. LDL is a transport protein that takes synthesized and stored cholesterol from the liver and carries it to the bloodstream where it can be used for steroid hormone

synthesis, cell synthesis, and other important physiological processes. If too much cholesterol is in the blood, it can begin to deposit in arterial walls leading to inflammation and recruitment of macrophages and other immune cells. Inflammatory responses measured by CRP, Interleukin-6 (IL-6), Tumour necrosis factor alpha (TNF- α), increased thrombogenesis and increase markers of endothelial dysfunction including E-selectin, ICAM, and impair flow-mediated vasodilation (measure of vascular NO production), all of which in combination or individually contribute to increased cardiovascular risk (5).

The biological mechanisms underlying the adverse effects of *trans* fatty acids on endothelial function are not clear. *Trans* fats are incorporated into endothelial cell membranes and thus could alter cellular and macromolecular components acting at the interface of the blood vessel wall. This could result in changes in the antihemostatic properties, altered vascular tone, hyperadhesiveness to blood leukocytes, and increased cytokine and growth factor production, all of which are characteristics of endothelial dysfunction (6).

An important feature during the development of atherosclerotic lesions is the infiltration of circulating monocytes into the intravascular space. LDL particles, especially the modified forms, increase the expression and secretion of soluble chemotactic compounds and enhance the expression of adhesion molecules such as integrins and selectins, which are exposed on the surface of activated endothelial cells and favor leukocyte (monocyte and T-cell) recruitment, adhesion, and transmigration. Diapedesis of monocytes takes place through the spaces (junctions) between endothelial cells, preferably in areas where the basal lamina is enriched with modified LDL particles. Then, infiltrated monocytes differentiate into macrophages and express scavenger receptors such as CD36 and LOX-1, which internalize many of the cholesterol molecules and cholesterol esters contained in modified LDL particles. LDL aggregates are potent inducers of massive cholesterol accumulation in macrophages; whereas some authors propose phagocytosis as the classic mechanism of LDL aggregates internalization in macrophages (7).

Cholesterol internalization leads to the formation of foam cells, a characteristic cell constituent of atherosclerotic lesions. In turn, foam cells secrete proinflammatory cytokines (TNF- α , IL-1 and IL-6), growth factors, tissue factor, interferon (IFN) γ , MMP, and reactive oxygen species (ROS) that maintain the chemotactic stimulus for leukocytes adhered to the vascular endothelium, increase the expression of scavenger receptors, and enhance macrophage replication (8).

Experimental studies suggest that TFA exert their multiple effects by influencing metabolic and signaling pathways in hepatocytes, monocytes, adipocytes and in endothelial cells. The precise molecular pathways through which TFA influence these cell types are unknown (9).

To determine the effect of TFA from repeated heating cooking oil to pro-inflammatory cytokine, we investigated the relations between TFA intake and blood TNF- α of the rat.

Material and Methods

Samples of this study were 8-week-old male *rattus norvegicus* strain wistar weight of 100-150 grams. The number of samples was 25 and there were divided into 5 groups. Group I was the control group that received standard diet for rats, and the other groups received an additional industrial cooking oil. Group II get an additional fresh corn oil, group III get an additional fresh palm oil. Group IV get an additional corn oil were performed three times repeated heating and group V get an additional palm oil performed three times repeated heating. Each rat in the group received 0.1 ml/10 g body weight / day for eight weeks.

Values for the *trans*-fatty acid from the repeated heating cooking oil performed at the Agricultural Research and Development Laboratories of the Indonesian Ministry of Agriculture.

After eight weeks of treatment, blood sample was taken from the rats and centrifuged within 30-45 minute of collection, and serum is separated from blood cells. TNF- α concentrations were measured from the serum by enzyme-linked immunoassay (eBioscience). This study was approved by the Research Ethics Committee of Medical Faculty of Andalas University.

Data are expressed as mean \pm SD, and values of $p < 0.005$ were considered statistically significant. Data were analyzed by one-way analysis of variance using the Bonferoni-post-hoc comparison test when appropriate.

Results, Discussion and Conclusion

The body weights of rats at the end of dietary period were increased in all groups, but the increase of weight did not differ among those consuming the standard diets with different kind of additional oil ($p > 0.005$). We suggest that increased of rats body weight was due to increasing of the age, feeding and maintenance.

Fatty acids are characterized as either *saturated* or *unsaturated* based on the presence of double bonds in its structure. During the partial hydrogenation, solidifies and stabilizes of polyunsaturated of vegetable oils the number of double bonds is reduced, while approx. 30-50% of unsaturated fatty acids are transformed from *cis* into *trans*(5). The main fatty acid formed in the process of vegetable oil solidification is elaidic acid (C18:1, *trans*-9). However, the process of frying or baking food in vegetable oils results in the generation of linoelaidic acid (C18:2; *trans*-9,12). The high temperature accompanying this process causes the conversion of the double bond from the *cis* configuration into *trans* fatty acid (2).

In our study, we obtained that the levels of *trans*-fatty acids in repeated heating palm oil was 0.2914mg/100 gr and in repeated heating corn oil was

0.4171mg/100gr, and the type of trans fatty acids in the repeated heating cooking oil was oleic acid. Oleic acid play a role in endothel dysfunction. The intake of oleic acid appeared to be more strongly associated with the concentrations of biomarkers as well as marker of inflammatory activation and endothelial dysfunction than *trans* palmitoleic acid and *trans* linoleic acid (10).

From the examination of TNF- α from rats blood serum, we obtained that TNF- α concentration in the group I as a control group was 59,36 \pm 7,84 μ g/ml, in the group II that get an additional fresh corn oil was 54,34 \pm 6,70 μ g/ml, in the group III that get an additional fresh palm oil was 72,25 \pm 5,65 μ g/ml, in the group IV that get an additional three times repeated heating corn oil was 108,71 \pm 6,39 μ g/ml and in the group V that get an additional three times repeated heating palm oil was 88,69 \pm 5,42 μ g/ml (table 1).

Table 1: Concentration of TNF- α in control group (I), group that added fresh corn oil (II), and fresh palm oil (III), group that added repeated heating corn oil (IV) and that added repeated heating palm oil (V)

No	Group (n=5)	Mean \pm SD
1	I	59,36 \pm 7,84
2	II	54,34 \pm 6,70
3	III	72,25 \pm 5,65
4	IV	108,71 \pm 6,39
5	V	88,69 \pm 5,42

In this study, the concentration of TNF- α of the groups that get an additional fresh corn oil were not statistically different to the control group ($p > 0,005$), but the group that get an additional fresh palm oil, the concentration of TNF- α was higher in compare to the control group ($p < 0,005$). The concentration of TNF- α of the group that get an additional three times repeated heating palm oil was higher in compare to control group and of the group that get an additional three times repeated heating corn oil was higher in compare to control group with highly statistically significant differences ($p < 0,005$).

Common dietary sources of unsaturated fat include fish and oils derived from olives, soybeans, corn and sunflower seeds. Common sources of saturated fat include fatty meats, whole dairy products and palm oils. Common sources of trans fat include margarine, various types of commercial baked goods and processed or fried foods.

Fresh Corn oil as unsaturated fatty in this study did not contribute to the concentration of TNF- α , otherwise fresh palm oil which is a saturated fatty acid contributes to the concentration of TNF- α . But when heated repeatedly its shown the high concentrations of TNF- α in corn oil than palm oil. Its indicating that heating process saturated fatty acid and unsaturated fatty acid were transformed into TFA may cause endothelial dysfunction.

TNF α is a pleiotropic cytokine that has many proinflammatory actions with negative inotropic effects. It has been implicated in the pathogenesis of many non-infectious disorders, from rheumatoid disease, to multiple sclerosis. This cytokine also affects the heart (11).

Intake TFA, which are come from repeated heating cooking oil, increasing LDL. Circulating LDL particles invade the arterial wall and accumulate in the intima, where they undergo chemical modifications, such as oxidation. Modified LDL can induce endothelial cell activation and expression of adhesion molecules. Furthermore, intimal macrophages can internalize modified LDL particles through scavenger receptors and become foam cells. Macrophages and lymphocytes release a range of proinflammatory cytokines and chemokines which stimulate the migration of smooth muscle cells from the media. This process is facilitated by cytokines such as IFN- γ and TNF- α secreted by proatherogenic Th1 cells and also IL-12 secreted by macrophages and foam cells (11).

TFAs intake is associated with an elevated risk of coronary artery disease and new-onset diabetes, and activation of the TNF system is a risk factor for diabetes, independent of adiposity. Thus, activation of the TNF system may represent a mediating step between TFA consumption and risks of coronary artery disease and diabetes (9). TFA activate TNF system throughout two mechanisms. First of all TFAs are incorporated into endothelial cell membranes, which have great number of cell-specific pathways associating to TNF system activation. Secondly TFAs may also modulate TNF system via effects on membrane phospholipids of macrophage and signaling pathways, with analogous mechanisms seen in n-3, n-6, and monounsaturated fatty acids. TNF- α is a potent cytokine that induces the production of IL-6, which is the major determinant of the acute phase response and is also produced by adipose tissue (4).

Numerous studies have correlated elevated dietary intake of TFA with increased mortality and morbidity from cardiovascular disease. This study examined the ability of TFA to activate endothelial NF- κ B and subsequently reduce NO production on endothelial dysfunction (9). TFA intake is positively associated with markers of systemic inflammation in women (4). Esmailzadeh and Azadbakh (12) found in Tehrani woman that higher intakes of partially hydrogenated vegetable oils. Partially hydrogenated vegetable oils are associated with elevated concentrations of inflammatory biomarkers, whereas higher intakes of non-hydrogenated vegetable oils are associated with lower plasma concentrations of these biomarker.

In conclusion, this studies demonstrate that repeated heating of two common industrial cooking oil increase *trans*-fatty acid that correlated with the concentration of TNF- α as proinflammatory cytokine in rats blood serum. These study lend further support for the recommendation to minimize the using of the repeated heating cooking oil in food processing.

The Effect of TRANS FATTY ACIDS

- Changes in lipid/lipoproteins
- Raises levels of LDL cholesterol and reduces HDL cholesterol
- Negative effect on endothelial function and reduced nitric oxide (NO) bioavailability
- Increased thrombogenesis and reduced endothelial function → increased inflammation

MATERIAL AND METHODS

RESULTS

- **The body weight**
 - increased in all groups in compare to control group (p<0,05)
 - no significant differentiation between group
- **The levels of trans-fatty acids**
 - repeated heating corn oil : 0,4171mg/100gr
 - repeated heating palm oil : 0,2914mg/100 gr
- **The type of trans fatty acids** : oleic acid.

Table 1: Concentration of TNF-α in control group (I), group that added fresh corn oil (II), and fresh palm oil (III), group that added repeated heating corn oil (IV) and that added repeated heating palm oil (V)

No	Group (n=5)	Mean ±SD
1	I (C)	59,36±7,84
2	II (FCO)	54,34±6,70
3	III (FPO)	72,25±5,65
4	IV (RHCO)	108,71±6,39
5	V (RHCO)	88,69±5,42

DISCUSSION

- Fresh Corn oil : unsaturated fatty → No contribution to the concentration of TNF-α,
- Fresh palm oil : saturated fatty acid contributes to the concentration of TNF-α.
- repeatedly heating : TNF-α in corn oil > palm oil.
- Its indicating that heating process saturated fatty acid and unsaturated fatty acid were transformed into TFA may cause endothelial dysfunction.
